Preface	vii
-------------------	-----

Part I: Fundamentals

Chapter 1 Energy in Thermal Physics	1
1.1 Thermal Equilibrium	1
1.2 The Ideal Gas	6
<i>Microscopic Model of an Ideal Gas</i>	
1.3 Equipartition of Energy	14
1.4 Heat and Work	17
1.5 Compression Work	20
<i>Compression of an Ideal Gas</i>	
1.6 Heat Capacities	28
<i>Latent Heat; Enthalpy</i>	
1.7 Rates of Processes	37
<i>Heat Conduction; Conductivity of an Ideal Gas;</i>	
<i>Viscosity; Diffusion</i>	
Chapter 2 The Second Law	49
2.1 Two-State Systems	49
<i>The Two-State Paramagnet</i>	
2.2 The Einstein Model of a Solid	53
2.3 Interacting Systems	56
2.4 Large Systems	60
<i>Very Large Numbers; Stirling's Approximation;</i>	
<i>Multiplicity of a Large Einstein Solid;</i>	
<i>Sharpness of the Multiplicity Function</i>	
2.5 The Ideal Gas	68
<i>Multiplicity of a Monatomic Ideal Gas;</i>	
<i>Interacting Ideal Gases</i>	
2.6 Entropy	74
<i>Entropy of an Ideal Gas; Entropy of Mixing;</i>	
<i>Reversible and Irreversible Processes</i>	

Chapter 3 Interactions and Implications	85
3.1 Temperature	85
<i>A Silly Analogy; Real-World Examples</i>	
3.2 Entropy and Heat	92
<i>Predicting Heat Capacities; Measuring Entropies; The Macroscopic View of Entropy</i>	
3.3 Paramagnetism	98
<i>Notation and Microscopic Physics; Numerical Solution; Analytic Solution</i>	
3.4 Mechanical Equilibrium and Pressure	108
<i>The Thermodynamic Identity; Entropy and Heat Revisited</i>	
3.5 Diffusive Equilibrium and Chemical Potential	115
3.6 Summary and a Look Ahead	120

Part II: Thermodynamics

Chapter 4 Engines and Refrigerators	122
4.1 Heat Engines	122
<i>The Carnot Cycle</i>	
4.2 Refrigerators	127
4.3 Real Heat Engines	131
<i>Internal Combustion Engines; The Steam Engine</i>	
4.4 Real Refrigerators	137
<i>The Throttling Process; Liquefaction of Gases; Toward Absolute Zero</i>	
Chapter 5 Free Energy and Chemical Thermodynamics	149
5.1 Free Energy as Available Work	149
<i>Electrolysis, Fuel Cells, and Batteries; Thermodynamic Identities</i>	
5.2 Free Energy as a Force toward Equilibrium	161
<i>Extensive and Intensive Quantities; Gibbs Free Energy and Chemical Potential</i>	
5.3 Phase Transformations of Pure Substances	166
<i>Diamonds and Graphite; The Clausius-Clapeyron Relation; The van der Waals Model</i>	
5.4 Phase Transformations of Mixtures	186
<i>Free Energy of a Mixture; Phase Changes of a Miscible Mixture; Phase Changes of a Eutectic System</i>	
5.5 Dilute Solutions	200
<i>Solvent and Solute Chemical Potentials; Osmotic Pressure; Boiling and Freezing Points</i>	
5.6 Chemical Equilibrium	208
<i>Nitrogen Fixation; Dissociation of Water; Oxygen Dissolving in Water; Ionization of Hydrogen</i>	

Part III: Statistical Mechanics

Chapter 6 Boltzmann Statistics	220
6.1 The Boltzmann Factor	220
<i>The Partition Function; Thermal Excitation of Atoms</i>	
6.2 Average Values	229
<i>Paramagnetism; Rotation of Diatomic Molecules</i>	
6.3 The Equipartition Theorem	238
6.4 The Maxwell Speed Distribution	242
6.5 Partition Functions and Free Energy	247
6.6 Partition Functions for Composite Systems	249
6.7 Ideal Gas Revisited	251
<i>The Partition Function; Predictions</i>	
Chapter 7 Quantum Statistics	257
7.1 The Gibbs Factor	257
<i>An Example: Carbon Monoxide Poisoning</i>	
7.2 Bosons and Fermions	262
<i>The Distribution Functions</i>	
7.3 Degenerate Fermi Gases	271
<i>Zero Temperature; Small Nonzero Temperatures;</i>	
<i>The Density of States; The Sommerfeld Expansion</i>	
7.4 Blackbody Radiation	288
<i>The Ultraviolet Catastrophe; The Planck Distribution;</i>	
<i>Photons; Summing over Modes; The Planck Spectrum;</i>	
<i>Total Energy; Entropy of a Photon Gas; The Cosmic</i>	
<i>Background Radiation; Photons Escaping through a Hole;</i>	
<i>Radiation from Other Objects; The Sun and the Earth</i>	
7.5 Debye Theory of Solids	307
7.6 Bose-Einstein Condensation	315
<i>Real-World Examples; Why Does it Happen?</i>	
Chapter 8 Systems of Interacting Particles	327
8.1 Weakly Interacting Gases	328
<i>The Partition Function; The Cluster Expansion;</i>	
<i>The Second Virial Coefficient</i>	
8.2 The Ising Model of a Ferromagnet	339
<i>Exact Solution in One Dimension;</i>	
<i>The Mean Field Approximation;</i>	
<i>Monte Carlo Simulation</i>	

*

*

*

Appendix A	Elements of Quantum Mechanics	357
A.1	Evidence for Wave-Particle Duality <i>The Photoelectric Effect; Electron Diffraction</i>	357
A.2	Wavefunctions <i>The Uncertainty Principle; Linearly Independent Wavefunctions</i>	362
A.3	Definite-Energy Wavefunctions <i>The Particle in a Box; The Harmonic Oscillator; The Hydrogen Atom</i>	367
A.4	Angular Momentum <i>Rotating Molecules; Spin</i>	374
A.5	Systems of Many Particles	379
A.6	Quantum Field Theory	380
Appendix B	Mathematical Results	384
B.1	Gaussian Integrals	384
B.2	The Gamma Function	387
B.3	Stirling's Approximation	389
B.4	Area of a d -Dimensional Hypersphere	391
B.5	Integrals of Quantum Statistics	393
